

1. Write a program to determine the IP address of a host using binary notation for an IP address.
2. Write a Socket Program in Java to determine the IP class of a host Computer.

```
// Get the InetAddress object representing the local host  
InetAddress localhost = InetAddress.getLocalHost();  
  
// Get the IP address as a String  
String ipAddress = localhost.getHostAddress();  
  
// Print the IP address  
System.out.println("Local IP Address: " + ipAddress);
```
