

BTCL has granted Jagannath University a block of addresses starting with **1XY.XY.0.0/20**. Jagannath University wants to create seven (7) subnets to distribute the addresses in different academic and administrative buildings.

Design the subnetworks and give the slash notation for each subnetwork.

Implement the network topology in packet tracer and test data transmission among different networks using **Static routing** only.

**N. B.: The point-to-point connections address can be allocated from the granted block or from any other block.**

**Site Address: 1XY.XY.0.0/20      [XY represents last two digits of your student ID]**
